

Clean Tech & Sustainability

Working to Protect and Preserve the Environment

In recent years, companies have begun to increasingly emphasize finding ways to generate revenues that protect both people and the environment. The attorneys at VLP counsel businesses on strategies to minimize their environmental impact and preserve the planet's natural resources. We work with start-up and emerging growth stage companies, as well as mature manufacturers and producers in Clean Tech, renewables and other sustainable and new energy industries to help them change the world. Our clients are developing alternative energy, waste mitigation, transportation infrastructure, and software tools to alleviate climate change and resource scarcity issues.

An Interdisciplinary Approach

At VLP, we take an interdisciplinary approach to our clients' needs as required to complete projects efficiently and cost-effectively, bringing together subject matter experts in:

- Corporate Structuring.
- Venture Capital and Angel Financing.
- Patent.
- Trademark.
- Technology Licensing.
- Real Estate.
- Project Finance.

VLP attorneys partner with clients to craft plans and strategies that best advance their business goals and interests. We have a substantial understanding of Clean Tech and sustainability business practices and we take the time to become familiar with our clients' companies and business operations. This knowledge and understanding has allowed us to help our clients take advantage of important opportunities and build businesses that support triple-bottom-line objectives.
